

COVID-19 RAPID COMBO

ANTIGEN TEST

(nasopharyngeal swab)

Rapid chromatography immunoassay for reliable detection of SARS-CoV-2 and influenza A+B antigens present in human nasopharynx

designed for COVID **19**

test result within **15** minutes

98 % correlation with PCR tests

Application

- diagnostic medical device in-vitro
- **allows diagnoses of COVID-19 and influenza type A and B**
- uses detection of SARS-CoV-2 virus antigens
- simple and fast design enables effective testing of large amount of patients

Kit includes

- testing cassette
- tube with extraction buffer
- nasopharyngeal swab
- accessories

Specification

- storage at 2 - 30 °C
- sample stability up to 24 hours at 2 -8 °C
- test result within 15 minutes
- > 98% correlation with PCR method
- control zone for internal procedure control

Rel. sensitivity (COVID-19)	96,4 %
Rel. specificity (COVID-19)	99,2 %
Accuracy (COVID-19)	98,0 %
